Task 3.1: Scripts and AI Assistance for Data Import

Name	Type	Author / User	Description (function and how to run)
`ImportSqlGenerator.java`	Java script	Zhong Haozhe	Reads the two provided CSV files, organizes the data, and generates `import.sql`. Run in IntelliJ IDEA with the repository root directory as the program argument.
`create_table.sql`	SQL script	Guo Liangyue	Defines the tables, constraints, and indexes. The generator reads this file and includes its statements in `import.sql`.
`import.sql`	Generated SQL script	Generated by Zhong Haozhe's Java program	Contains statements to remove old project tables, create tables, and insert data. Connect to the target PostgreSQL database in DataGrip and run the entire file.
OpenAI Codex (GPT-6.1 Terra)	AI coding tool	Zhong Haozhe	Assisted with the overall approach and code structure of `ImportSqlGenerator.java`, and with writing, modifying, and explaining the generator code.
